

EXPRIMENT-1

1.)Write a C program for Caesar cipher involves replacing each letter of the alphabet with the letter standing k places further down the alphabet, for k in the range 1 through 25.

PROGRAM:

A screenshot of a Python IDE window titled 'main.py'. The window has a dark background with light-colored text. At the top right, there are two buttons: 'Visualize' and 'Run' (with a play icon). The code is as follows:

```
1 plaintext = input("Enter the plaintext: ")
2 k = int(input("Enter the key (1-25): "))
3
4 ciphertext = ""
5
6 for ch in plaintext.upper():
7     if ch.isalpha():
8         ciphertext += chr((ord(ch) - ord('A') + k) % 26 + ord('A'))
9     else:
10        ciphertext += ch
11
12 print("Ciphertext:", ciphertext)
```

OUTPUT:

A screenshot of a terminal window showing the output of the program. The text is as follows:

```
Enter the plaintext: HELLO WORLD
Enter the key (1-25): 3
Ciphertext: KHOOR ZRUOG
```
