EXPRIMENT-17

17.) DES Decryption Key Generation

Aim:

To write a Python program to generate DES decryption keys in reverse order.

PROGRAM:

```
def generate_keys():

    keys = []

    for i in range(1, 17):
        keys.append("K" + str(i))

    return keys

encryption_keys = generate_keys()

decryption_keys = encryption_keys[::-1]

print("Encryption Keys:")
print(encryption_keys)

print("Decryption Keys:")
print(decryption_keys)
```

OUTPUT:

```
Encryption Keys:
['K1', 'K2', 'K3', 'K4', 'K5', 'K6', 'K7', 'K8', 'K9', 'K10', 'K11', 'K12', 'K13',
'K14', 'K15', 'K16']
Decryption Keys:
['K16', 'K15', 'K14', 'K13', 'K12', 'K11', 'K10', 'K9', 'K8', 'K7', 'K6', 'K5',
'K4', 'K3', 'K2', 'K1']
```

RESULT:

Thus, the DES decryption key sequence was successfully generated in reverse order.
